

Fishbowl Inventory®

Fishbowl Inventory - QuickBooks Integration Overview

Set-up and high-level integration

Fishbowl Inventory downloads all of your customer, vendor, parts, and quantity information directly from QuickBooks, thereby eliminating hours of manual entry. From that point forward, Fishbowl Inventory handles all of the Sales Orders, Purchase Orders, manufacturing processes, and inventory control. Then, as work is done within Fishbowl Inventory that requires a change in the General Ledger, Fishbowl Inventory will write that information directly to the QuickBooks file for you.

Fishbowl Inventory is the #1 Selling Inventory Control Program for QuickBooks and currently holds Intuit's highest award for third-party integrators, Gold Developer Status.

QuickBooks vs. QuickBooks with Fishbowl

Fishbowl Inventory & QuickBooks: Total Solution

QuickBooks is the world's most popular and easy to use accounting package but is limited in its inventory control capabilities. But, add Fishbowl Inventory to your QuickBooks solution and you now have a full-scale inventory control-order entry package that runs off a SQL database, tracks inventory at multiple locations, handles unlimited parts, tracks serial and lot numbers and, in short, provides the entire inventory tracking ability that QuickBooks is lacking.
