

UPS Ready®

Fishbowl's two core products are now certified UPS Ready with seamless UPS integration.

This means that ***Fishbowl Manufacturing® (FBM)*** and ***Fishbowl Warehouse® (FBW)*** integrate directly with UPS in a way that meets their strict standards and makes shipping a whole lot easier.

Here are three frequently asked questions to bring you up to speed on what UPS Ready is and what it does for your business:

Did Fishbowl's core products integrate with UPS before they were certified UPS Ready? Yes. FBM and FBW also integrate with UPS WorldShip®. Fishbowl now gives you the choice of using UPS WorldShip or shipping with UPS directly from within FBM or FBW.

How is this UPS integration different than UPS WorldShip? WorldShip has to be installed separately from Fishbowl products whereas the UPS integration is now built into both FBM or FBW. Extra installation is no longer required and you don't have to leave FBM or FBW or open a Web browser to access UPS features.

You can start using UPS features simply by logging into FBM or FBW. They're all there waiting to make your job of getting products to customers easier.

What does the UPS integration do? The shipping tasks you can perform with UPS directly from FBM or FBW include:

- ***Automatically send shipment notices to UPS for pickup***
- ***Compare cost estimates for different shipping types (e.g. air, ground, and next day)***
- ***Print UPS labels from within FBM or FBW***
- ***Automatically email UPS packing lists and tracking numbers to customers when their packages are shipped***
