

**Fishbowl is a business automation platform** that integrates with dozens of other solutions to help small and midsize businesses track inventory, monitor incoming and outgoing orders, handle manufacturing jobs, and much more. Fishbowl is the #1 selling manufacturing and warehouse management solution for QuickBooks, and it has held that title for more than a decade.

**METRC** is a "seed-to-sale" Cannabis Tracking System (CTS) selected by state regulators to track and deliver data on their recreational and medical cannabis programs. METRC works with both sides of industry and regulatory stakeholders to enable the transparent tracking of cannabis. By using cloud, barcode, and RFID technology, METRC offers a vertically integrated closed-loop platform for cannabis businesses.

**FISHBOWL FEATURES:** Fishbowl will soon integrate with METRC, offering cannabis growers, producers, and retailers numerous advanced features:

- *Multilevel bills of materials, as well as work orders, manufacture orders, and other manufacturing tools.*
- *The ability to track inventory in multiple locations and study trends on a per-location basis.*
- *Automatic reorder points on each item in a warehouse to avoid shortages and overstock.*
- *Seamless integration with QuickBooks and Xero to eliminate double data entry and ensure data accuracy across accounting and inventory solutions.*
- *Bin locations within warehouses to organize warehouse space and speed up receiving and picking.*
- *Cycle counts that instantly update inventory quantities in the system.*
- *A variety of criteria to track inventory, including lot numbers, serial numbers, and expiration dates.*
- *Integrations with numerous shipping, e-commerce, merchant services, and other business solutions.*
- *Mobile delivery solution with signature confirmation to ensure shipments are received by the right person.*

**FISHBOWL'S METRC INTEGRATION:** As the cannabis market continues to expand, companies will need a more robust inventory management solution to meet their increasingly complex requirements. Wider distribution, product customization, and other changes will make the limitations of manual inventory systems clear. Trying to record vital inventory information in Excel is impractical once you reach high volumes.

Growers, producers, and retailers will enjoy the following features through Fishbowl's integration with METRC:

- *Manage a variety of plants and harvests across multiple locations.*
- *Track the progress of plants through the growth cycle.*
- *Harvest plants into packaged products.*
- *Use bills of materials and work orders to manufacture finished goods.*
- *Manage and track unused plant and package tags.*
- *Transfer plants from one location to another within a facility or between facilities.*
- *Generate detailed reports on many aspects of your inventory and operations.*
- *Batch update METRC from Fishbowl.*
- *Always keep your inventory and accounting records in sync.*

**INTEGRATION RELEASE:** Initial markets Fishbowl will focus on include Alaska, Colorado, Maryland, and Oregon, but there are plans to expand into many other states as the need arises.

**Please contact Fishbowl to get the latest information on the availability of its METRC integration by emailing [sales@fishbowlinventory.com](mailto:sales@fishbowlinventory.com) or calling **1.800.774.7085 ext. 2****
