

If you purchase the right inventory solution, your investment will pay you back year after year in savings. This allows you to grow and prosper due to efficiencies that couldn't exist previously.

Here is a sample ROI for a 5-user installation of Fishbowl over 5 years. The average comes from our top implementers' experience working with customers, helping them automate their inventory processes. Every business will be unique, so these savings represent many different areas companies have saved in, such as eliminating double and triple data entry, reducing human error, preventing stockouts, and avoiding rush fees on new inventory, lost inventory, and time spent re-counting inventory. There are also savings in reduced manpower requirements, as well as setting auto reorder points on critical inventory so items are always on hand when needed. The list could go on and on.

For this example, the average cost for a 5-user package that includes full training, support, and needed plugins is \$19,836. Assuming no additional users are purchased, the annual renewal going forward is only \$2,500. The projected compounded savings are based on what our implementers have experienced working with Fishbowl customers. The savings are slightly better for companies using Fishbowl Manufacturing (FBM) vs. Fishbowl Warehouse (FBW) due to less downtime in production/assembly. Here are the areas, hours and average wages used to calculate this 5-user average ROI.
