

Checkout™ Point of Sale Software—Fishbowl is combining its powerful core products Fishbowl Manufacturing® (FBM) and Fishbowl Warehouse® (FBW) with Checkout, a new retail management solution for point of sale order processing. Checkout is designed to work directly with FBM or FBW and offers retail software and hardware for businesses that need sales and payment processing along with the manufacturing or warehouse management processes required to operate successfully. Some of Checkout’s advanced features include:

Touchscreen Ready: Checkout is touchscreen-friendly software with an easy-to-use interface and intuitive screen layout.

Barcode Ready: Functionality includes a barcode-ready design with the ability to scan items by product number, UPC, or SKU. Products can be sold individually or as a kit, and you can quickly manage discounts, promotions, and other custom prices with our customizable pricing options.

Many Tracking Options: Checkout also offers the ability to sell products tracked by serial number, expiration date, lot number, or any additional tracking fields that may be needed.

Payment Processing: Payment Processing is easy to manage with direct credit card processing through QuickBooks Merchant Services or Authorize.net, as well as cash and check payments.

Fishbowl Core Product Integration: With the back-end power of FBM or FBW integrating seamlessly with the front-end retail software of Checkout, you can streamline your cash flow and better manage your business processes.

See the table below for a complete list of features.
