

Access Fishbowl Manufacturing or Fishbowl Warehouse from Anywhere with Any Device with an Internet Connection. Fishbowl Anywhere® (FBA) is a plugin that allows access to the full Fishbowl Client in a Web browser. This isn't just a small part of the software or an entirely new solution. It is the actual Fishbowl business automation platform, which is normally installed on a computer. What FBA does is let you use the full functionality of Fishbowl anywhere and on any device with an Internet connection. Simply log in and it's just like you're on the solution back at the office.

Here are some of the key features of FBA:

- *Once the plugin is installed, there's nothing else to download or run. Just open a Web browser and you have instant access to Fishbowl.*
- *FBA connects to Fishbowl via all major browsers, including Chrome, Internet Explorer, Firefox, and Safari.*
- *You can also use FBA to access SalesPoint, Fishbowl's point of sale solution.*
- *Reorder products, check inventory amounts, and do everything else you normally do in Fishbowl from a remote location.*

FBA is a useful tool for salespeople working in the field, warehouse workers who need to update inventory numbers away from a desktop computer, and other businesspeople who need to get up-to-date inventory data on the fly.
